

15/11/21

Fixed continuous deployment as old buddy system has failed. Rewrote the python webscraping script and verified that it is working. Also made sure that the config files on the main server were correct (all should be working now).

Implemented widget on dashboard to display last scraping log.

29/11/21

Fixed an issue with the website search - also added virtual tours page to the main site

10/12/21

Fixed some issues with virtual tours page (mainly an issue of acf field naming on my development site). Also removed some debug output that was on the live site

03/01/22

Verified that scraping plugin works - there was an issue with the main site config that broke this - the file was being tracked by git which was a mistake. Also need to make sure that certbot certificates are renewing.

They seem to be, but nginx needs to be restarted to take them into effect.

/etc/letsencrypt/live/prime-life.co.uk/fullchain.pem /etc/letsencrypt/live/prime-life.co.uk/privkey.pem

10/01/22

Swapped to a two font system - Raleway for headings, cabin for body text. This should make numbers more readable across the site

These font changes need to be propagated across the site.

Also restyles the posts as they looked bad on the home page.

13/01/22 Replaced PHPMailer with WP SMTP - this has fixed the persistent issues with the contact forms (Google being angry at how the account was being accessed)

Generated API keys for GMAIL account (primelifeweb@gmail.com)

23/01/2022

Fixed some duplicate CSS, old scss files were still in repo and breaking the style on my development site. Also, the style for the contact us page needs updating badly.

Alt vtours page is not working locally for me - some js issue?
